

## PHILOSOPHY

*At the end of the day, we want to have made life better for people. When our team accomplishes this, we feel on top of the world.*

*It is no secret that infrastructure spurs economic development. The most common historical example is Rome; we are thrilled to be carrying on that kind of tradition of engineering excellence and ingenuity. **What guided us to engineering** is the love of problem solving and the satisfaction of having an efficient and beautiful physical product.*

The overall philosophy of our firm is to be honest and reliable people; essentially, we do what we say we will do. This business is personal to us and we understand that our projects are personal to you, the client.

Our mission is to improve the built environment through excellent planning and design as well as to positively contribute to the surrounding communities.

This over-arching idea encompasses our core values outlined below. **Ideas Begin Here. Decisions End Here.** As such, these values not only affect issues such as client service and human resource management, but are also built into the “brick and mortar” structures that we create.

### CLIENT ORIENTED

We fully align with our client’s culture, mission, and vision, providing solutions to tough challenges, and offering confidence and certainty to decision makers. As our client you come first. We will advocate for your needs.

### POSITIVE EMPLOYEE ENVIRONMENT

We provide employees with a challenging, supportive, and comfortable work environment and encourage personal growth.

### COMMUNITY RELATIONSHIPS

We believe that involvement in our community is essential to the success of individuals both inside and outside of our company.

### THOROUGH COMMUNICATION

We communicate our plans and keep stakeholders informed regarding timetables, budgets, impacts, and decision points; we get the message out.

### INTEGRITY

This is the mind set that guides our personal and professional behavior; it requires honesty and character.
